**Ball Publishing Webinar: The A to Z of Growing Perennials in HydraFiber**

**10/17/2019 - 10/17/2019**

**1:00 p.m. EST/12:00 p.m. CST**

As a horticultural consultant, Paul Pilon of Perennial Solutions Consulting visits a lot of growers around the world, and sees many production systems and growing mixes. In this educational, free webinar, Paul will share his observations of various perennial crops grown in HydraFiber and the feedback he's received from growers across the country. You'll also want to tune in for his "keys to success," including:

- Uniform blending
- Filling guidelines, including initial moisture content
- pH management and how to determine how much lime is needed
- Managing moisture in production
- Long-term vs. short-term crops
- Overwintering in HydraFiber

Joining Paul will be HydraFiber team member Daniel Norden, Senior R&D Manager and Technical Specialist Manager for Profile Products' horticulture business, who will share recent Auburn University research on perennials and shrubs, plus results from several grower perennials trials.

The fourth in a multi-part series sponsored by HydraFiber featuring independent research and trials by academics and growing experts is focused on helping growers build an efficient and effective media program.
